Windows Boot Manager

Windows failed to start. A recent hardware or software change might be the cause. To fix the problem:

1. Insert your windows installation disc and restart your computer.
2. Choose your language settings, and then click "Next."
3. Click "Repair your computer."

If you do not have this disc, contact your system administrator or the manufacturer for assistance.

Status: 0xc000000e

Info: The boot selection failed because a required device is inaccessible.

**Knight Capital Group realized a \$460 million loss in 45 minutes.**

**Doug Seven**

<https://dougseven.com/2014/04/17/knightmare-a-devops-cautionary-tale/>

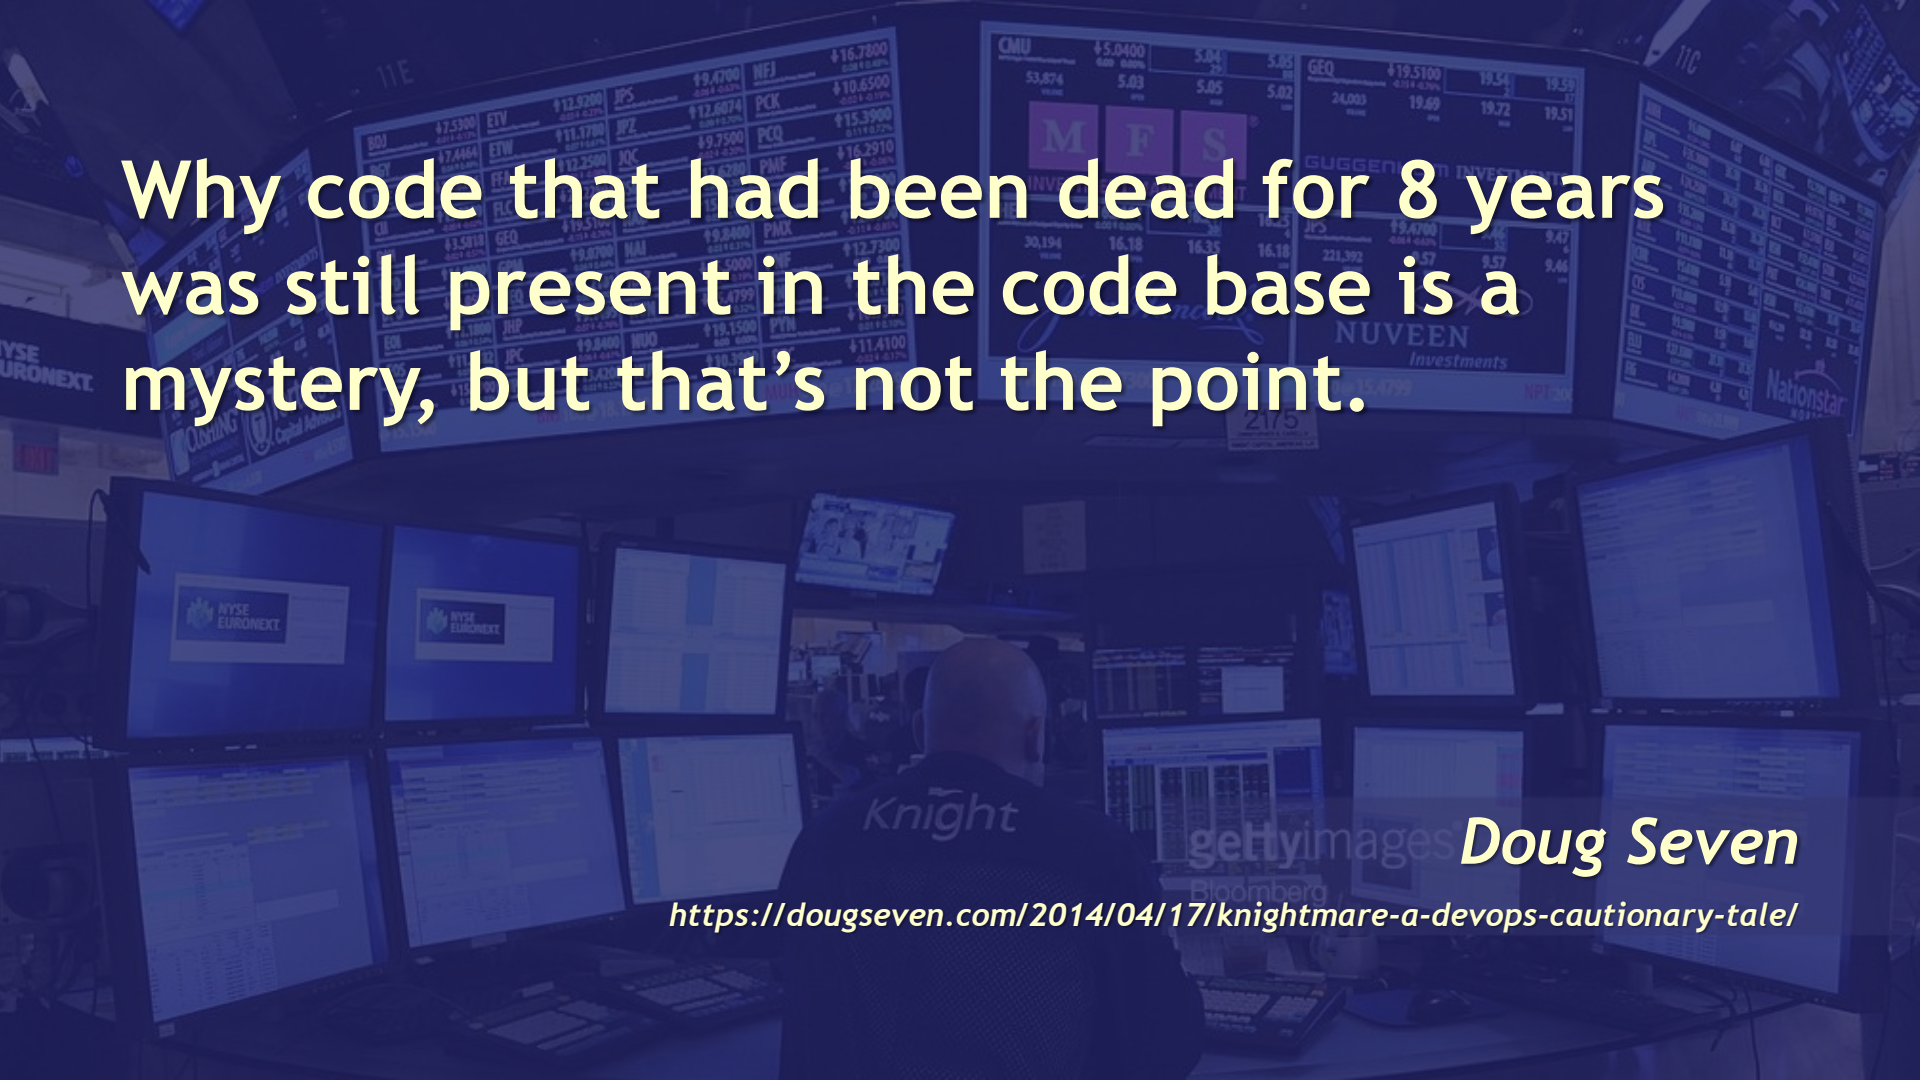

The update to SMARS was intended to replace old, unused code referred to as “Power Peg” — functionality that Knight hadn’t used in 8-years.

*Doug Seven*

<https://dougseven.com/2014/04/17/knightmare-a-devops-cautionary-tale/>

Why code that had been dead for 8 years was still present in the code base is a mystery, but that's not the point.

*Doug Seven*

<https://dougseven.com/2014/04/17/knightmare-a-devops-cautionary-tale/>

The code that that was updated repurposed an old flag that was used to activate the Power Peg functionality.

*Doug Seven*

<https://dougseven.com/2014/04/17/knightmare-a-devops-cautionary-tale/>

**In the first 45 minutes the market was open the Power Peg code received and processed 212 parent orders. As a result SMARS sent millions of child orders into the market resulting in 4 million transactions against 154 stocks for more than 397 million shares.**

***Doug Seven***

*<https://dougseven.com/2014/04/17/knightmare-a-devops-cautionary-tale/>*

The failure resulted in a loss of more than US\$370 million.

Schiaparelli's Inertial Measurement Unit (IMU) went about its business of calculating the lander's rotation rate. For some reason, the IMU calculated a saturation-maximum period that persisted for one second longer than what would normally be expected at this stage.

When the IMU sent this bogus information to the craft's navigation system, it calculated a negative altitude.

<http://gizmodo.com/a-crazy-miscalculation-doomed-the-schiaparelli-lander-1789319670>

That fateful miscalculation set off a cascade of despair, triggering the premature release of the parachute and the backshell, a brief firing of the braking thrusters, and activation of the on-ground systems as if Schiaparelli had already reached the surface.

This all happened while the vehicle was still two miles (3.7 km) above ground.

# Simple Testing Can Prevent Most Critical Failures

*An Analysis of Production Failures in  
Distributed Data-Intensive Systems*

Almost all catastrophic failures  
are the result of incorrect  
handling of non-fatal errors  
explicitly signalled in software.

A majority of the production failures (77%) can be reproduced by a unit test.

Prill

rust

I have yet to see any problem,  
however complicated, which,  
when you looked at it in the  
right way, did not become still  
more complicated.

Anderson's Law

I would therefore like to posit that computing's central challenge, "How not to make a mess of it", has not been met.

Edsger W Dijkstra

Most of our systems are much more complicated than can be considered healthy, and are too messy and chaotic to be used in comfort and confidence.

Edsger W Dijkstra

# Software faults raise questions about the validity of brain studies

<http://arstechnica.com/science/2016/07/algorithms-used-to-study-brain-activity-may-be-exaggerating-results/>

Cluster identification algorithms frequently assign activity to a region when none is likely to be present.

How frequently? Up to 70 percent of the time, depending on the algorithm and parameters used.

A bug that has been sitting in the code for 15 years showed up during this testing.

The fix for the bug reduced false positives by more than 10 percent.

**On two occasions I have been asked, —  
"Pray, Mr. Babbage, if you put into the  
machine wrong figures, will the right  
answers come out?"**

**I am not able rightly to apprehend the  
kind of confusion of ideas that could  
provoke such a question.**

**Charles Babbage**

**People tend to forget that even the most elegantly crafted spreadsheet is a house of cards, ready to collapse at the first erroneous assumption.**

Steven Levy

*A Spreadsheet Way of Knowledge*

<https://backchannel.com/a-spreadsheet-way-of-knowledge-8de60af7146e>

**In August 1984, the Wall Street Journal reported that a Texas-based oil and gas company had fired several executives after the firm lost millions of dollars in an acquisition deal because of "errors traced to a faulty financial analysis spread sheet model."**

Steven Levy

*A Spreadsheet Way of Knowledge*

<https://backchannel.com/a-spreadsheet-way-of-knowledge-8de60af7146e>

Gene name errors  
are widespread in the  
scientific literature

The spreadsheet software Microsoft Excel, when used with default settings, is known to convert gene names to dates and floating-point numbers.

A programmatic scan of leading genomics journals reveals that approximately one-fifth of papers with supplementary Excel gene lists contain erroneous gene name conversions.

Essex and McKittrick present an example that purports to show that whether you use the arithmetic or some other mean can affect whether or not you find a [global] warming trend.

Tim Lambert

<http://scienceblogs.com/deltoid/2004/05/20/mckitrick3/>

Harvard University economists Carmen Reinhart and Kenneth Rogoff have acknowledged making a spreadsheet calculation mistake in a 2010 research paper, "Growth in a Time of Debt", which has been widely cited to justify budget-cutting.

<http://www.bloomberg.com/news/articles/2013-04-18/faq-reinhart-rogoff-and-the-excel-error-that-changed-history>

The correction is substantial: the paper said that countries with 90% debt ratios see their economies shrink by 0.1%. Instead, it should have found that they grow by 2.2%.

**With spreadsheets, the danger is not so much that incorrect figures can be fed into them as that "garbage" can be embedded in the models themselves.**

Steven Levy

Facebook is now in the awkward position of having to explain why they think they drive purchase decisions but not voting decisions

We show, via a massive ( $N = 689,003$ ) experiment on Facebook, that emotional states can be transferred to others via emotional contagion, leading people to experience the same emotions without their awareness.

I am actively searching through Facebook for people celebrating the Brexit leave victory, but the filter bubble is SO strong, and extends SO far into things like Facebook's custom search that I can't find anyone who is happy \*despite the fact that over half the country is clearly jubilant today\* and despite the fact that I'm \*actively\* looking to hear what they are saying.

<https://www.facebook.com/tom.steinberg.503/posts/10157028566365237>

Algorithms such as the one that powers Facebook's news feed are designed to give us more of what they think we want.

The digital advertising model doesn't currently discriminate between true or not true, just big or small.

Facebook makes billions of editorial decisions every day.

The fact that these decisions are being made by algorithms rather than human editors doesn't make Facebook any less responsible for the harmful effect on its users and the broader society.

## **mechanocracy, noun**

- Government or control of society by machines, or a state or other association of people run in such a way.
- The idea of machine rule brings to mind robots, but the term refers more broadly to the wide-scale automation of governance and social management through software.

## **mechanocracy, noun**

- The scheduling, allocation and management of work in this way already exists, e.g., Amazon's Mechanical Turk and Uber, as does the evaluation and judgement of status and access, e.g., credit-rating systems, and the shaping of our online experience and consequent choices and echo chambers via various algorithms and deep learning systems, e.g., Facebook and Google.

<https://www.facebook.com/WordFriday/posts/1048841271870496>

## **mechanocracy, noun**

- A positive view of mechanocracy is that it has the potential to be free of human bias and interests, optimised for the betterment of humanity. There is evidence, however, that the emerging mechanocracy may not be so benign, falling far short of a utilitarian ideal, open to the distortion of public discourse and democracy.

As mankind relies more and more on the software that controls the computers that in turn guide society, it becomes crucial that people control absolutely the programs and the processes by which they are produced, throughout the useful life of the program.

Meir M Lehman

"Programs, Life Cycles, and Laws of Software Evolution"

We shape our algorithms  
and afterwards our  
algorithms shape us.
